Vision

To become an academy of excellence in technical education and human resource development.

* Mission

- To develop engineering graduates of high repute with professional ethics.
- To excel in academics and research through innovative techniques.
- To facilitate the employability, entrepreneurship along with social responsibility.
- To collaborate with industries and institutes of national recognition.
- To inculcate lifelong learning and respect for the environment.

To promote excellence in academic and training activities by inspiring students for becoming competent professionals to cater industrial and social needs.

Tatyasaheb Kore Institute of engineering and Technology, Warananagar An Autonomous Institute Department of Mechanical Engineering

PROGRAM EDUCATIONAL OBJECTIVES

Graduates will be able to,

- [1] Make successful careers in Indian and multinational companies
- [2] Be competent with strong technological background to solve industrial and societal problems
- [3] Succeed in a post graduate as well as research programs.
- [4] Be sensitive towards professional ethics and environmental issues.
- [5] Lead teams for executing multidisciplinary projects

PROGRAM OUTCOMES

After completion of the Program, graduates will have,

- [1] An ability to apply knowledge of mathematics, science and engineering fundamentals to solve complex Mechanical engineering problems
- [2] An ability to analyze the mechanical problem, interpret data through synthesis and evaluate to make conclusion
- [3] Capability to solve complex engineering problems and design system components or processes as per specified requirements addressing public health, safety, cultural, societal and environmental issues
- [4] An ability to identify the problems and apply the research methodology to formulate, investigate and validate the outcomes.
- [5] An ability to make use of advanced techniques and tools necessary in engineering practices
- [6] An ability to understand societal, health, safety, legal and cultural issues while providing solutions for mechanical engineering problems
- [7] An ability to develop sustainable solutions and identify with their effects on society and environment
- [8] An apply ethical principles and commit to professional ethics and responsibilities of the engineering practice
- [9] An ability to function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- [10] An ability to comprehend technical ideas, communicate through effective design documentation and oral presentation.
- [11] An ability to lead and manage multidisciplinary teams by applying engineering and management principles.
- [12] An ability to engage in independent and life long learning in the broadest context of advancement in technology.

PROGRAM SPECIFIC OUTCOMES

- [1] Graduates will be able to model and analyze the machine design problems.
- [2] Graduates will be able to demonstrate the working of energy conversion devices.
- [3] Graduates will be able to manufacture the products using different machine tools.

Description:

In mechanical industries, conversion of heat energy into mechanical energy is prime task to achieve different applications. Therefore, mechanical students should have knowledge of thermodynamics, heat transfer and design of thermal systems. This course is designed to provide knowledge of modes of heat transfer, basic laws, mathematical equations required for analysis and design. It also covers study of combined modes of heat transfer and heat exchangers.

| | 1: Fluid Mechanics | | | | | | | | | | | |
|-----------|---|-------|--|--|--|--|--|--|--|--|--|--|
| Prerequis | sites: 2: Basic Thermodynamics | | | | | | | | | | | |
| | 3: Engineering Mathematics | | | | | | | | | | | |
| | Section – I | | | | | | | | | | | |
| | Introduction to Heat and Mass Transfer | | | | | | | | | | | |
| Unit 1 | Basic concepts: Modes of heat transfer, Basic laws of heat transfer, Introduction to combined modes of heat transfer, Thermal conductivity and its variation with temperature for various Engg. Materials (Description only), Introduction to mass transfer, Modes of mass transfer, Analogy between heat, mass and momentum transfer, Fick's law of diffusion, Derivation of Generalized differential equation of heat conduction in Cartesian co-ordinates, its reduction to Fourier, Laplace and Poisson's equations, Generalized Heat conduction equation in cylindrical and spherical coordinates (no derivation). One dimensional steady state heat conduction without heat generation: Reduction of Generalized differential equation of Heat Conduction to one dimension (1D), Heat conduction through plane wall; cylinder; sphere, electrical analogy, concept of thermal resistance and conductance, composite slab, composite cylinder and composite sphere, critical radius of insulation for cylinder and sphere. | | | | | | | | | | | |
| - | Heat Conduction with Heat Generation and Unsteady State Heat Conduction | | | | | | | | | | | |
| Unit 2 | One dimensional steady state heat conduction with heat generation: One dimensional steady state heat conduction with uniform heat generation for plane wall; cylinder; and sphere (with numerical on plane wall and cylinder) One dimensional unsteady state heat conduction: Lumped Heat capacity Analysis, Biot and Fourier number and their significance, (Numerical based on Lumped Heat capacity Analysis) | | | | | | | | | | | |
|] | Extended Surfaces | | | | | | | | | | | |
| Unit 3 | Types and applications of fins, Heat transfer from rectangular and pin fins. Fin effectiveness and efficiency, Analysis of fin with insulated end and infinite long fin, Error estimation in temperature measurement in thermo well (No numerical on error estimation). | 6 Hrs | | | | | | | | | | |
| | Section – II | | | | | | | | | | | |
| | Convection | | | | | | | | | | | |
| Unit 4 | Mechanism of natural and forced convection. Concept of Hydrodynamic and thermal boundary layer, Local and average convective coefficient for laminar and turbulent flow for flat plate and pipe. Natural convection: Dimensional analysis, Physical significance of | 6Hrs | | | | | | | | | | |
| | Natural convection: Dimensional analysis, Physical significance of WARANANAGAR Dist. Kolhapur | | | | | | | | | | | |

| | dimensionless numbers, correlations for natural convection over vertical plate, cylinder, & sphere and flow patterns. Forced convection: Dimensional analysis, Physical significance of dimensionless numbers, Reynolds analogy for laminar flow, Correlations for forced convection over flat plate and closed conduits. | |
|--------|---|-------|
| | Radiation | |
| Unit 5 | Nature of thermal radiation, absorptivity, reflectivity, transmissivity, emissive power and emissivity, spectral and total concept, blackbody, gray body, and white body Kirchhoff's law, Wein's law and Planck's law, and deduction of Stefan Boltzmann law. Lambert cosine rule, Intensity of radiation. Energy exchange by radiation between two black surfaces with non-absorbing medium in between and in absence of reradiating surfaces. Shape factor and its characteristics. Energy exchange by radiation between two gray surfaces without absorbing medium, concept of radiosity and irradiation. Radiation network method, network for two surfaces which see each other and nothing else, radiation shields. | 6 Hrs |
| | Heat Exchangers | |
| Unit 6 | Classification and types of heat exchangers, Fouling factor, and Overall heat transfer coefficient, Heat Exchanger analysis using LMTD and NTU methods for parallel and counter flow, Design consideration of Heat exchangers | 6 Hrs |

ME503 – DESIGN OF MACHINE ELEMENTS –I

40 Marks 60 Marks

| Lectures | : 3 Hrs/Week | Evaluation Scheme |
|-----------|--------------|----------------------------------|
| Credit | : 3 | ISE : 40 Ma |
| Tutorials | : 2 Hr/Week | $\mathbf{ESE} : 60 \text{ Ma}$ |

Course Objectives: The objective of the course is to

1. Study basic principles of machine design.

- 2. Understand the principles involved in evaluating the dimensions of a mechanical component to satisfy functional and strength requirements.
- 3. Learn use of catalogues and design data book.

| Course Outcomes: | | | | | | | | | |
|------------------|--|--------------------|--|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | |
| CO1 | Identify and apply basic principles of machine design | Knowledge | | | | | | | |
| CO2 | Design machine elements on the basis of strength concept. | Understand | | | | | | | |
| CO3 | Solve the design problems for various machine elements used in industries | Apply | | | | | | | |
| CO4 | Prepare assembly and detail drawings for different machine elements. | Analyze | | | | | | | |
| CO5 | Use design data books and standard practices. | Create | | | | | | | |
| CO6 | Select machine elements from Manufacturers catalogue by applying standard design criteria. | Evaluate | | | | | | | |

Description:

The main task of mechanical engineer is to design the mechanical elements as per the requirement to accomplish the objective of task. It is done by the study of this course. It covers principles, theory, and mathematical expressions regarding the design process. By applying the basic principles of machine design students should be able to design the Machine Elements like Knuckle Joint, Turn Buckle, lever, Shaft, Couplings, Welded & Bolted joints, Springs and Belts.

| | 1 | Engineering Mechanics |
|----------------|---|---------------------------------|
| Prerequisites: | 2 | Analysis of Mechanical Elements |
| | 3 | Theory of Machines -I |

| | Section – I | | | | | | | | |
|---------------|--|-------|--|--|--|--|--|--|--|
| | Fundamentals of Machine Design | | | | | | | | |
| Unit 1 | Concept of Machine design, Types of loads, Factor of safety- its selection and significance, Theories of failure (Maximum Principle stress, Maximum shear stress and Maximum Distortion Energy), Phases of design of machine elements, Review and selection of various engineering material properties and I.S. coding for ferrous materials, Factors governing selection of Engineering materials. | 5 Hrs | | | | | | | |
| | Design of Mechanical Elements | | | | | | | | |
| Unit 2 | a) Design of machine elements under static loading- Knuckle joint, Turn buckle and bell crank Lever. (Numerical on Knuckle Joint and Bell crank Lever).b) Forms of threads, Terminology of threads, Trapezoidal and Acme thread, Design of power screw and nuts (Numerical on Power Screw with Square thread). | 8 Hrs | | | | | | | |
| | Design of Shaft, Keys, and Couplings | | | | | | | | |
| Unit 3 | Design of solid and hollow shafts, ASME code for shaft design, Splined Shaft (Theory), Types and Design of Keys, Types of Couplings, Design of Rigid flange coupling, Bushed pin type flexible coupling. | | | | | | | | |
| Section – I | I | | | | | | | | |
| | Design of Joints | | | | | | | | |
| Unit 4 | Design of bolted joints subjected to following conditions- 1) Joints in shear 2) Joints subjected to load perpendicular to the axis of bolt. Design of welded joints- 1) Strength of transverse and parallel fillet welds 2) Eccentric load in the plane of weld (Theoretical Treatment) 3) Welded joint subjected to have dive memory (Theoretical Treatment) | | | | | | | | |

ME504 (OEC-I) INDUSTRIAL INSTRUMENTATION AND CONTROL

| Lectures |
|----------|
| Credit |

: 2Hrs/Week : 2

Evaluation SchemeISE: 40 Marks

ESE : 60 Marks

Course Objectives: The objective of the course is to

1. Impart knowledge of architecture of the instrument & measurement system

- 2. Deliver working principle of mechanical measurement system
- 3. Study concept of mathematical modeling of the control system
- 4. Acquaint with control system under different time domain

| Course | Outcomes: | |
|--------|--|-------------------------|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy |
| CO1 | Classify various types measuring system and their static characteristics and types of errors occurring in the system. | Knowledge Understand |
| CO2 | Classify and select proper measuring instrument for linear and angular displacement, acceleration | Knowledge Apply |
| CO3 | Classify and select proper measuring instrument for pressure and temperature measurement | Understand Apply |
| CO4 | Design mathematical model of system/process for standard input responses | Analyze |
| CO5 | Analyze error and differentiate various types of control systems and time domain specifications | Apply Evaluate |
| CO6 | Analyze the problems associated with root locus stability | Apply |

Description:

Instrumentation and control is at the core of all industrial and manufacturing activities. Within a production facility, every process must be carefully monitored and controlled to proceed in a predetermined fashion like optimized and safe. When working with heavy and dangerous equipment, getting accurate measurements can be a very difficult process. This is why instrumentation is so important. Because of the number of processes involved in modern machines, accurate instrumentation and control is needed to ensure that everything is operating properly.

| | 1: Fluid mechanics, Applied physics. | | | | | | | | | |
|---|--------------------------------------|-----|--|--|--|--|--|--|--|--|
| Prerequisites: 2: Electrical technology basic terms. | | | | | | | | | | |
| 3: Partial Differentiation, Laplace transformation, integration formulae. | Differentiation | and | | | | | | | | |

| | Section – I | |
|-----------|---|---------------------------|
| | Introduction to Instrumentation | |
| Unit 1 | Significance of Mechanical Measurements, Classification of measuring instruments, generalized measurement system Static characteristics: Static calibration, Linearity, Static Sensitivity, Accuracy, Static error, Precision, Reproducibility, Threshold, Resolution, Hysteresis, Drift, Span & Range etc. Errors in measurement, Types of errors. | 3 Hrs |
| | Instrumentation I | |
| Unit 2 | Displacement Measurement: Potentiometer, LVDT, Strain Measurement: Gauge factor, temperature Compensation, Bridge circuit, orientation of strain gauges for force and torque, Strain gauge based load cells Measurement of Angular Velocity: Tachometers, Stroboscopic Methods. Acceleration Measurement: accelerometer and vibrometers | 6 Hrs |
| | Instrumentation II | |
| Unit 3 | Pressure Measurement: Bourdon tubes, diaphragm, bellows and piezoelectric pressure sensors, Vacuum measurement: Vacuum gauges by Thermal Conductivity gauges Flow Measurement: Bernoulli flow meters and Rota meter Temperature Measurement: Resistance thermometers, Thermistors and thermocouples, Pyrometers | 6 Hrs |
| Section - | - 11 | |
| | Mathematical Model of Control System | |
| Unit 4 | Introduction to control systems, Classification of control system. Open loop and closed loop systems. Mathematical Model of Control System, Mechanical Translational Systems, Grounded Chair Representation, Electrical Elements, Analogous Systems, Force – Voltage Analog, Force – Current Analog | 4 Hrs |
| | Transient Response | |
| Unit 5 | General Form of Transfer Function, Concept of Poles and Zeros, Distinct, Repeated and Complex Zeros. Response of systems to various Inputs (Impulse, Step, Ramp & Sinusoidal). Damping Ratio and Natural Frequency, Transient Response Specification and steady state analysis of first and second order system. Time Domain specifications. Step response of second order system. | 5 Hrs |
| | Root Locus | |
| Unit 6 | Introduction to concepts of stability, Routh criteria for stability Significance of Root Locus, Construction of Root Loci, General Procedure, Effect of Poles and Zeros on the System Stability analysis using Root locus | 6 Hrs |

ME504-MODELLING AND SIMULATION OF MANUFACTRING SYSTEMS

| Lectures | : | 2Hrs/Week |
|-----------|---|-----------|
| Credit | : | 2 |
| Tutorials | : | |

Evaluation Scheme ISE : 40 Marks ESE : 60 Marks

Course Objectives : The objective of the course is to

- 1. Acquaint students with basics of simulation modeling
- 2. Increase understanding of random numbers and random variates in simulation and being able to generate it using different techniques
- 3. Enable development of simulation models using heuristic methods
- 4. Enable analysis of simulation model using input analyzer and output analyzer
- 5. Comprehend the usefulness of simulation as a tool for problem solving to solve real world problems

| Course | Course Outcomes: | | | | | | | | | | | |
|--------|---|-------------------------|--|--|--|--|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | | | | |
| CO1 | Define the basics of simulation modeling and understanding how to replicate the practical situations in organizations | Knowledge Understand | | | | | | | | | | |
| CO2 | Generate random numbers and random variates using different techniques | Understand | | | | | | | | | | |
| CO3 | Develop simulation model using heuristic methods. | Apply | | | | | | | | | | |
| CO4 | Apply statistical distribution to replicate the real-world situations | Apply | | | | | | | | | | |
| CO5 | Analysis of Simulation models using input analyzer, and output analyzer | Analyze | | | | | | | | | | |
| CO6 | Explain Verification and Validation of simulation model | Analyze | | | | | | | | | | |

| Description: | | | | | | | | | |
|---|--|--------------------------------|--|--|--|--|--|--|--|
| Process Modellin with all importa application in ma | Process Modelling & Simulation course is offered as an open elective course. The course deals with all important aspects of discrete event system simulation with particular emphasis on application in manufacturing, services and computing. | | | | | | | | |
| | 1: Basic knowledge of numerical mathematics | | | | | | | | |
| Prerequisites: | 2: | Basic knowledge of probability | | | | | | | |
| | 3: | Basic knowledge of statistics | | | | | | | |

| | Section – I | |
|--------|--|------|
| | Introduction to Simulation | |
| Unit 1 | Introduction to Simulation: Simulation, Advantages, Disadvantages, Areas of application, System environment, components of a system, Model of a system, types of models, steps in a simulation study. Simulation Examples: Simulation of Queuing systems, Simulation of Inventory System, Other simulation examples. | 6Hrs |
| | General Principles and Random Numbers | |
| Unit 2 | General Principles: Concepts in discrete - event simulation, event scheduling/ Time advance algorithm, simulation using event scheduling. Random Numbers: Properties, Generations methods, Tests for Random number- Frequency test, Runs test, Autocorrelation test. | 5Hrs |
| | Random Variate Generation and Optimization | |
| Unit 3 | Random Variate Generation: Inverse Transform Technique- Exponential, Uniform, Weibull, Triangular distributions, Direct transformation for Normal and log normal Distributions, convolution methods- Erlang distribution, Acceptance Rejection Technique Optimisation Via Simulation: Meaning, difficulty, Robust Heuristics, Random Search. | 5Hrs |
| | Section – II | |
| | Analysis of Input Data and Verification & Validation of Model | |
| Unit 4 | Input Modelling: Data collection, Identification and distribution with data, parameter estimation, Goodness of fit tests, Selection of input models without data, Multivariate and time series analysis. Verification and Validation of Model – Model Building, Verification, Calibration and Validation of Models. | 5Hrs |
| | Analysis of Output Data | |
| Unit 5 | Output Analysis – Types of Simulations with Respect to Output Analysis, Stochastic Nature of output data, Measures of Performance and their estimation, Output analysis of terminating simulation, Output analysis of steady state simulations. | 5Hrs |
| | Problem Solving and Case Studies | |
| Unit 6 | Introduction to Monte Carlo Simulation, Inventory Control Simulation using Monte Carlo Techniques, Problem Solving on Monte Carlo Simulation. Different case studies on usefulness of simulation modelling for real manufacturing system | 4Hrs |

| Tutorials | : | | ESE | : | 60 Marks | | |

Course Objectives: The objective of the course is to

1. Study of metal cutting technology including the process, measurements.

- 2. Design and selection of various cutting tools and their industrial specifications
- 3. Study of Geometry of various cutting tools
- 4. Introduce the students to design practices of toolings (Jigs and Fixtures)
- 5. Study of various press working tools
- 6. Study of various aspects of CNC machine technology and its tooling.

| Course Outcomes: | | | | | | | | | | | |
|------------------|--|-------------------------|--|--|--|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | | | |
| CO1 | Comprehend various metal cutting theories. | Knowledge Understand | | | | | | | | | |
| CO2 | Identify and select proper cutting process and cutting tool considering work piece materials. | Understand Apply | | | | | | | | | |
| CO3 | Interpret parameters of single and multipoint cutting tools. | Knowledge Understand | | | | | | | | | |
| CO4 | Classify, design and draw Jigs and Fixtures for the manufacturing of given mechanical components. | Apply Create | | | | | | | | | |
| CO5 | Design various dies for press working operations by considering principles and established theory. | Apply Analyze | | | | | | | | | |
| CO6 | Understand various terminologies used in CNC machines and its applications. | Understand Apply | | | | | | | | | |

Description:

Computer-integrated manufacturing (CIM) refers to the use of computer-controlled machineries and automation systems in manufacturing products. CIM combines various technologies like computer-aided design (CAD) and computer-aided manufacturing (CAM) to provide an error-free manufacturing process that reduces manual labor and automates repetitive tasks. The CIM approach increases the speed of the manufacturing process and uses real-time sensors and closedloop control processes to automate the manufacturing process. It is widely used in the automotive, aviation, space and ship-building industries.

ME501P- THEORY OF MACHINE-II LAB

Practicals: 2 Hrs/WeekCredits: 1

Examination Scheme ISA : 25 Marks POE : 25 Marks

Course Objectives: The objective of the course is to 1. Learn about various elements used in mechanism such as gears, gyroscope etc. 2. Identify and make different types of gear trains required in machines 3. Recommend particular mechanism as per the specified applications Blooms **Course Outcomes:** Taxonomy Cos At the end of successful completion of the course, the student will be able to CO1 Knowledge Understand classification, construction, working of different types of Understand gears and gear trains used in machines. CO₂ Analyze Identify the effect of gyroscopic couple in machines Know the Problems of balancing in rotary machines and provide the CO3 Understand appropriate solution for the same. Evaluate CO4 Analyze Estimate and determine forces in simple mechanism. Evaluate **Description:**

The Theory of machine laboratory consists of a number of models of gears, gears trains, and various mechanisms. Students are able to enhance their basic and fundamental knowledge of Theory of machine by effective using of these models.

ME502P - HEAT & MASS TRANSFER LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 25 Marks POE : 25 Marks

Course Objectives: The objective of the course is to

1. Study the experiments to determine the thermal conductivity of metal and insulating materials

- 2. Experimentally calculate heat transfer performance parameters for natural convection, forced convection and radiation modes.
- 3. Calculate the emissivity of surface which is required for radiation heat transfer analysis

| | Course Outcomes: | | | | | | | |
|-----|--|--------------------|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | |
| CO1 | Apply heat transfer principles to determine the thermal conductivity of metal and insulating materials | Apply | | | | | | |
| CO2 | Calculate heat transfer coefficient for natural and forced convection by performing experiments. | Apply | | | | | | |
| CO3 | Estimate emissivity of given surface and Stefan Boltzmann constant in radiation mode. | Apply Analyze | | | | | | |
| CO4 | Demonstrate and analysis the performance heat exchanger and heat pipe | Analyze | | | | | | |

| Description: | | | | | | | |
|---|---|---|--|--|--|--|--|
| In heat and mass emissivity are the estimate these var about how to de extended surface | s tran ne in alues etern es. It | nsfer analysis, thermal conductivity, convective heat transfer coefficients and nportant properties. In this lab, students will get experimental approach to for different materials and thermal systems. This subject provides knowledge nine heat transfer through composite structure system, heat exchanger and is useful for students to solve real time problems of industries. | | | | | |
| 1: Fluid Mechanics | | | | | | | |
| Prerequisites: 2: Basic Thermodynamics | | | | | | | |
| | 3: | Engineering Mathematics | | | | | |

ME503T – DESIGN OF MACHINE ELEMENTS -I LAB

| Practicals | : 2 hrs/ week | Examination Scheme |
|------------|---------------|-----------------------|
| Credits | :1 | ISA : 25 Marks |
| | | POE : NA |

| Course Objectives: The objective of the course is to | | | | | | | |
|---|--|-------------------------|--|--|--|--|--|
| Study bas Understan Functiona Learn use | Study basic principles of machine design. Understand the methods involved in evaluating the dimensions of a component to satisfy Functional and strength requirements. Learn use of catalogues and design data book to extract required design information | | | | | | |
| Course Outcomes: | | | | | | | |
| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | |
| CO1 | Identify and apply basic principles of machine design. | Knowledge Understand | | | | | |
| CO2 | Design machine elements on the basis of strength concept. | Understand Apply | | | | | |
| CO3 | Formulate and solve the problems of various machine elements used in industries. | Apply Analyze | | | | | |
| CO4 | Prepare assembly and detail drawings for different machine elements. | Analyze | | | | | |

Description:

The main task of mechanical engineer is to design the mechanical elements as per the requirement to accomplish the objective of task. It is done by the study of this course. It covers principles, theory, and mathematical expressions regarding the design process. By applying the basic principles of machine design students should be able to design the Machine Elements like Knuckle Joint, Turn Buckle, lever, Shaft, Couplings, Welded & Bolted joints, Springs and Belts.

| | 1 | Mechanics |
|----------------|---|---------------------------------|
| Prerequisites: | 2 | Analysis of Mechanical Elements |
| | 3 | Theory of Machines –I |
| A GILLIN A | | |

Practicals:

| Sr. No. | Practical Topic | Hrs. | Bloom's Taxonomy |
|------------|---|------|-------------------------|
| 1 | Assignments on selection of materials for various components showing their IS codes, composition and properties | 2 | Knowledge Understand |
| 2 | Design and Drawing of Knuckle joint. | 2 | Understand Analyze |
| 3 | Design and Drawing of flexible bushed pin type flanged coupling. | 2 | Understand Analyze |
| 4 | Assignments on Problems on Bolted Joint. | 2 | Apply |
| 5 | Assignments on Problems on Design of helical compression spring subjected to static load. | 2 | Apply Analysis |
| 6 | Assignments on Problems on Selection of Belts as per the manufacturer's catalogue. | 2 | Evaluate |

| CO4 | Design mathematical model of system/process for standard input responses | Design | | | | | |
| CO5 | Analyze error and differentiate various types of control systems and time domain specifications | Apply Evaluate | | | | | |

Description:

Instrumentation and control is at the core of all industrial and manufacturing activities. Within a production facility, every process must be carefully monitored and controlled to proceed in a predetermined fashion like optimized and safe. When working with heavy and dangerous equipment, getting accurate measurements can be a very difficult process. This is why instrumentation is so important. Because of the number of processes involved in modern machines, accurate instrumentation and control is needed to ensure that everything is operating properly

ME504T-MODELLING AND SIMULATION OF MANUFACTRING SYSTEMS

| Practicals | : 2 hrs/ week |
|------------|---------------|
| Credits | :1 |

Examination Scheme ISA : 25 Marks POE : NA

Course Objectives: The objective of the course is to

1. Enable development of simulation models using heuristic methods.

- 2. Enable analysis of simulation model using input analyzer and output analyzer
- 3. Comprehend the results of the simulation model and draw conclusions

| Course Outcomes: | | | | | | | |
|------------------|---|--------------------|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | |
| CO1 | Conceptualize real world situations related to systems development decisions, originating from source requirements and goals. | Apply | | | | | |
| CO2 | Develop simulation models and execute it to generate meaningful results. | Apply | | | | | |
| CO3 | Interpret the model and results to resolve critical issues in a real- world environment. | Apply | | | | | |

Description: The Process Modelling & Simulation tutorial consists of several exercises where students will be working on developing simulation model to replicate manufacturing system and service operation. Students understand the underlying concept while working on simulation package for replicating the manufacturing systems and learn to comprehend the results from simulation output.

Suggested Simulation Packages: Promodel, Arena, Quest, Witness, Extend, Simio

ME506P - ARDUINO MODEL MAKING LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 50 Marks POE : 25 Marks

list. Kolhaou

Course Objectives: The objective of the course is -

- 1. To illustrate and demonstrate programming for basic Arduino models.
- 2. To demonstrate and facilitate students to learn the fundamentals of digital systems and op-amps which are necessary for Arduino based simple models.
- 3. To illustrate and facilitate to build the prototype circuits and connect them to the Arduino for building useful models.

| Course Outcomes: | | | | | | |
|------------------|---|--------------------------|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to- | Blooms Taxonomy | | | | |
| CO1 | Understand the Arduino programming language and IDE used in industrial applications. | Knowledge, Understand | | | | |
| CO2 | Demonstrate the interfacing various sensors with Arduino. | Knowledge Apply | | | | |
| CO3 | Install Arduino IDE (Integrated Development Environment - or Arduino Software), run the Arduino executable file, Using IDE to prepare Arduino sketch. | Apply, Synthesis | | | | |
| CO4 | Use Arduino to build specific application/system. | Create | | | | |

Description:

Arduino based model making laboratory is both a hardware platform and a programming language. By learning how to build circuits and code, students can add a new level of interactivity to their projects. The Arduino programming language is based on a combination of C and C++. Learn the Arduino platform and programming language to create robots, electronic toys, home automation tools, and much more. The laboratory is an excellent learning drive for the students to understand the building block of Integrated circuits using breadboards, transistors, resistors, capacitors, LED, motor controls, etc.

ME508T - MINI-PROJECT PHASE -I

Practicals: 1 hrs/ weekCredits: 1

Examination Scheme ISA : 50 Marks POE : NA

Dist. Kolhap

Course Objectives: The objective of the course is to

- 1. To provide students hands on experience on, troubleshooting, maintenance, fabrication, innovation, record keeping, documentation etc. thereby enhancing the skill and competency part of technical education.
- 2. To inculcate innovative thinking and thereby preparing students for main project.
- 3. To familiarize the process of solving the problem in a group.

| Course Out | Course Outcomes: | | | | | | |
|------------|--|-------------------------|--|--|--|--|--|
| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | |
| CO1 | Identify small real engineering and societal problems through different types of surveys (Literature survey, Industrial survey etc.) | Understand Knowledge | | | | | |
| CO2 | Solve and Analyze these problems by using software / analytical / computational tools and techniques by applying engineering principles. | Apply Analyze | | | | | |
| CO3 | Develop model / technical reports with presenting skills to defend their work in front of technically qualified audience. | Evaluate Create | | | | | |
| CO4 | Develop problem solving capabilities by self-learning in a team as well as an individual, which leads to lifelong learning. | Analyze | | | | | |

| The mini projec practical tools/tec academic instituti work jointly in co the norms provide | s designed to help students develop practical ques in order to solve real life problems relate s. Each student of the project group shall invol- ant consultation with guide, batch Incharge and p hem. | ability and knowledge about ed to the industry, society and lve in carrying out the project prepare the project report as per | | | | | | |
| 1: Engg. Mathematics, Engg. Physics, Engg. Chemistry | | | | | | | | |
| Prerequisites: | : Basic Knowledge of Mechanical Engg. | etitus | | | | | | |
| | | WARANANAGAR | | | | | | |

Practical's:

| Guidelines and Activities for Mini Project throughout year | | | | | | |
|--|---|--|--|--|--|--|
| | First Semester Activities | | | | | |
| Allotment of Batch in charge and Guide | Department will provide you batch in charge for every batch in the time table. Allotted faculty takes care of whole batch throughout semester. Also after formation of group, project guide will be allotted to each group by department for throughout year. He will be entirely guide you, starting from the selection of topic to the completion. Batch in-charge will keep the record of entire batch during practical hours. He will also coordinate the activity along with guide and project coordinator. | | | | | |
| Group formation | Group should be formed within the Batch of 4 to 5 students in one group, not more than that | | | | | |
| Topic Selection | By doing the discussion along with your concerned guide. Group should decide the topic for Mini Project. ***Project work shall be based on any of following 1. Design and development/fabrication of small setup/model 2. Theoretical/Software analysis of any small mechanical system/subsystem of large system 3. Testing and analysis of small mechanical system 4. Software program for any mechanical system design or analysis 5. Industrial survey of any mechanical systems, data collection and analysis | | | | | |
| Literature review | After selection of topic student should collect related information by searching and xeroxing/ downloading the journal paper from various sources. Also xeroxing the reference books pages related to their topic. | | | | | |
| Synopsis Writing | This is important activity of this semester. Synopsis is blueprint/plan of your mini project. With the help of your guide you have to write synopsis in department given format. | | | | | |
| Progress presentation | In the middle of semester student should give the presentation on synopsis in front of guide and batch incharge. | | | | | |
| Expected work in Semester - I | Each project group must complete, minimum these activities at the end of first semester 1) Synopsis writing 2) Literature Review Chapter (6-8 pages) 3) Theoretical Design on Paper | | | | | |
| Final Presentation of Mini Project semester I | At the end of semester, each group will give presentation on project work of this semester in front of guide, batch in-charge and one more faculty from department. This presentation will be assessed for 25 Marks internal term work. You have to submit two hard copies of your synopsis report to the department along with you have to show the project diary** and literature review file*** | | | | | |

| | Second Semester Activities |
|--|---|
| Continuation of Work | Same group with same guide continued their previous semister work in next semister it is expected that at least 30 percent work should completed in first semester |
| Fabrication and Testing of model/Theoretical analysis /Surveying analysis/Testing of software program | Complete core part of your project as above under the instructions of guide |
| Presentation of your work in the form of project report | Writing the Project report of 20 to 25 pages in standard format given by department. |
| Progress presentation | In the middle of semester student should give the progress presentation in front of guide and batch in charge. |
| Final Presentation of Mini Project semester II | At the end of semester, Students have to give Project Report presentation in front of guide, batch in-charge and one more faculty from department. This presentation will be assessed for 25 Marks internal term work. Every project group should have to submit two hard copies of good quality project reports to the department along with submission of the project diary and literature review file. |
| Sponsored Project/Participated Project in Project/Paper competition | Sponsored project and project which is participated in project competition/Paper presentation, three bonus Marks shall be considered, in the final term work calculations. |
| ** Project Diary | It is simple note book in which students should keep the record of meetings, along with guide and their discussion about mini project. Also you have to maintain the record of rough calculations, drawings and observations of your project. |

| | Collect all the information or material related to your topic (Xerox or printout of | | | | | |
|---------------------|---|--|--|--|--|--|
| *** Literature file | journal papers, reference books, Hand books, internet materials etc.) in one file. | | | | | |
| | Project report should be of 10 to 15 pages (typed on A4 size sheets). For | | | | | |
| | standardization of the project reports the following format should be strictly | | | | | |
| | followed. | | | | | |
| | 1. Page Size: Trimmed A4 | | | | | |
| | 2. Top Margin: 1.00 Inch | | | | | |
| | 3. Bottom Margin: 1.32 Inches | | | | | |
| | 4. Left Margin: 1.5 Inches | | | | | |
| | 5. Right Margin: 1.0 Inch | | | | | |
| | 6. Para Text: Times New Roman 12 Point Font | | | | | |
| | 7. Line Spacing: 1.5 Lines | | | | | |
| Project Report | 8. Page Numbers: Right Aligned at Footer. Font 12 Point. Times | | | | | |
| Format: | New Roman | | | | | |
| | 9. Headings: Times New Roman, 14 Point Bold Face | | | | | |
| | 10. Certificate: All students should attach standard format of | | | | | |
| | Certificate as described by the department. Certificate should be | | | | | |
| | awarded to batch and not to individual student. Certificate | | | | | |
| | should have signatures of Guide, Head of Department and | | | | | |
| | Principal/Director. | | | | | |
| | 11. References: References should have the following format | | | | | |
| | a. For books: "Title of Book", Authors, Publisher, Edition | | | | | |
| | b. For Papers: "Title of Paper", Authors, Journal/Conference | | | | | |
| | Details, Year | | | | | |

Practicals

Credits

In today's highly competitive world, students have to undergo a lot of mental stress and also have to get involved in so many things in order to acquire knowledge as per global market trends. Hence co-curricular activities play a very significant role. Students become technically competent and capable to work in versatile engineering fields. As a future technocrats, it is the need of the day to give exposure to advance technology by participating in different co-curricular activities that is existing in the curriculum. Students have to submit participation certificate to the department.

ME601- INDUSTRIAL FLUID POWER

Lectures: 3 hrs / week Credits: 3

Evaluation Scheme: ESE : 60 Marks

ISE : 40 Marks

Course Objectives: The objective of this course is to

1) Impart knowledge about the fundamentals of Hydraulic and pneumatic system.

- 2) Prepare the students to study different pumps and compressors in hydraulic and pneumatic system.
- 3) Educate the students about hydraulic fluids and characteristics of fluids.
- 4) Impart knowledge about various control valves and its functions.

5) Enable the students to design components of Hydraulic and pneumatic system.

| Course Out | tcomes: | |
|-------------|---|---------------------|
| COs | At the end of successful completion of the course the student will be able to | Blooms Taxonomy |
| CO1 | Demonstrate Hydraulic and pneumatic system | Understand Apply |
| CO2 | Investigate the performance of Hydraulic and pneumatic system | Apply Analyze |
| CO3 | Explain the use of different types of valves and actuators. | Understand |
| CO4 | Apply Hydraulic and pneumatic system fundamentals to industrial applications | Apply |
| CO5 | Demonstrate about the fundamentals of Hydraulic and pneumatic circuits used in industrial applications | Knowledge Apply |
| CO6 | Select different types of motors and pumps for different applications. | Analyze |
| Decemintion | | |

Description

Industrial Fluid Power is offered as the program elective course. This course contains basic principles and applications in Hydraulics and Pneumatics in Mechanical Engineering. In this course students will learn about fundamentals, properties, principles and applications of different hydraulic components. Students will get knowledge of designing different hydraulic circuits used in industrial applications. This course has six units namely **i**) Introduction to Fluid Power **ii**) Hydraulic System Elements **iii**) Control of Fluid Power Elements **iv**) Elements of Pneumatic System **v**) Hydraulic Circuits and its Application **vi**) Pneumatic Circuits and its Application

| | 1: Engineering Physics |
|----------------|---------------------------------|
| Duouoquisitog | 2: Basic Mechanical Engineering |
| rrerequisites: | 3: Fluid Mechanics |
| | 4: Applied Thermodynamics |

| | Section - I | |
|---------------|--|--------|
| | Introduction to Fluid Power | |
| Unit 1 | Classification, general features, applications in various fields of engineering, various hydraulic and pneumatic ISO/JIC Symbols, transmission of power at static and dynamic states, advantages and disadvantages. Principle of hydraulic system, Types of hydraulic fluids and their properties, selection of fluid, effect of temperature on fluids. Introduction and Application of pneumatics, Physical properties, Principles, basic requirements of pneumatic system, comparison with hydraulic system. | 8 Hrs. |
| | Hydraulic System Elements | |
| Unit 2 | Classification, types of seals, sealing material, pipes, hoses, compatibility of seal with fluid, sources of contamination and its control, strainer, filter, heat-exchanger, reservoir. Pumps-types, selection of pumps from Gear, vane, piston, screw, ball pump etc. for various applications. Actuators-linear and rotary, hydraulic motors, types of hydraulic cylinders and their mountings. Accumulators, intensifier and their applications. | 6 Hrs. |
| | Control of Fluid Power Elements | |
| Unit 3 | Requirements of Pressure control, direction control and flow control valves. Principle of pressure control valves directly operated and pilot operated pressure relief valve, pressure reducing valve, sequence valves, counter balance valve. Principles and Types of direction Control valves-2/2, 3/2, 4/2, 4/3, 5/2. Open center, close center, tandem center, manual operated, mechanical operated solenoid, pilot operated direction control valves, check valves. Principles of flow control valves, temperature compensated, pressure compensated, temperature and pressure compensated flow control valve. Hydraulic servo system for linear and rotary motion | 6 Hrs. |

| | Section - II | |
|--------|---|--------|
| | Elements of Pneumatic System | |
| Unit 4 | Air compressor- Types, selection criteria, capacity control, piping layout, fitting and connectors, Pneumatic controls, Direction control valves (two- way, three-way, four-way), check valves, flow control valves, pressure control valves, speed regulators, quick exhaust valves, time delay valve, shuttle valve and twin pressure valve. Solenoid operated, pilot operated valves, Pneumatic actuators, Rotary and reciprocating cylinders–types and their mountings, Air motor – types, Comparison with hydraulic and electric motor. Serving of compressed air – types of filters, regulators, lubricators (FRL unit), mufflers, dryers. Maintenance, troubleshooting and safety of hydraulic and pneumatic system. | 8 Hrs. |
| Unit 5 | Hydraulic Circuits and its Application | |
| om s | Speed control circuits – Meter-in, Meter-out, Bleed off, Regenerative, Fast approach and slow traverse. Sequence circuits – Travel dependent and Pressure dependent Synchronizing circuit. Regenerative circuit. | 6 Hrs. |
| Unit 6 | Pneumatic Circuits and its Application. | |
| | Speed control circuits Impulse operation circuit. Sequence circuits. Time delay circuit. | 6 Hrs. |

ME602-METROLOGY AND QUALITY CONTROL

| Lectures | : | 3 Hrs/Week | Evalua | tion Scheme | | | |
|----------|---|------------|--------|-------------|----------|--|--|
| Credit | : | 3 | ISE | : | 40 Marks | | |
| | | | ESE | • | 60 Marks | | |

Course Objectives: The objective of the course is to

1. Understand the use of standards in measurement, gauges and tolerances.

2. Study the use of various comparators and angle measuring instruments.

3. Study the advanced methods in metrology and measurement of surface roughness.

4. Study the methods used for the measurement of screw threads and gears.

5. Study the concept of quality control and quality assurance and QC tools.

6. Understand the various SQC techniques.

| Course | Course Outcomes: | | | | | | | | |
|--------|---|------------------------|--|--|--|--|--|--|--|
| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | |
| CO1 | Identify the use of various measuring instruments and select appropriate instrument for particular feature measurement. | Knowledge Evaluate | | | | | | | |
| CO2 | Understand the principles, construction, working and use of comparators and angle measuring instruments. | Understand Apply | | | | | | | |
| CO3 | Learn advanced techniques of metrology in various industrial applications. Prepare drawings with general dimensions, tolerances and surface finish. | Understand Apply | | | | | | | |
| CO4 | Apply the methods of measurement of screw threads and gears. | Understand Apply | | | | | | | |
| CO5 | Distinguish and understand the quality assurance and quality control and different QC tools. | Understand Evaluate | | | | | | | |
| CO6 | Interpret various control charts and their applications in process control. | Analysis Evaluate | | | | | | | |

Description:

The Metrology and Quality Control subject consists of a number of measuring instruments, gauges and their use to check the dimensional features and physical dimensions of various components. Students are able to enhance their basic and fundamental knowledge of machine drawing to study the dimensional features and physical dimensions of the components and by selecting the appropriate measuring instrument they should able to check these dimensional features and physical dimensional features used in the industry.

Prerequisites: 1: Machine Drawing

WARANANAGAR Dist. Kolhapur

| | Section – I | |
|--------|--|-------|
| | Linear measurement and Limits fits and tolerances. | |
| Unit 1 | Need of measurement, International standards of length, line and end measurement, types and sources of errors in measurement, slip gauges, IS specifications of limits, Maximum metal limit and least metal limit, Unilateral and bilateral tolerances, Types of Fits, Gauges and their classification, Taylor's principle of gauge design, Numerical treatment on design of gauges. | 8 Hrs |
| | Comparators and Angle Measurement | |
| Unit 2 | Classification of comparators and their uses, advantages and disadvantages of various types of comparators. Mechanical comparator (Dial indicator, Sigma and Johansson Mikrokator. Pneumatic comparator (Solex and Differential), Use of Bevel protractor, sine bar, sine center, clinometers, angle dekkor and auto collimator for angle measurement. | 6 Hrs |
| | Advancements in Metrology, and surface roughness | |
| Unit 3 | Introduction & application of Coordinate Measuring Machine, introduction and use of machine vision system. Principle of interferometry and its application for checking flatness. Surface roughness terminology, Direction of lay, textures, symbols, Numerical assessment of surface roughness, Instruments used in surface roughness assessment. (Tomlinson and Talysurf surface testers) | 6 Hrs |
| | Section – II | |
| | Metrology of Screw Threads and Gears | |
| Unit 4 | Different errors in screw threads, Measurement of forms of thread with profile projector, Pitch measurement, Measurement of thread diameters with standard wire, screw thread micrometer. Errors in gears, Measurement of Spur Gears, Run out checking, Pitch measurement, Profile checking, Backlash checking, Tooth thickness measurement. | 7 Hrs |
| | Quality Control | |
| | Concept of Quality, Quality control and quality assurance, Specification of quality, Factors controlling quality of design and conformance, Cost of quality, Balance between cost and quality and value of quality, Seven QC tools. | 6 Hrs |
| | Statistical Quality Control and Acceptance Sampling | |
| Unit 6 | Importance of statistical method in quality control, ND curve, Different types of control charts (Numerical treatment on X Bar, R, P and C charts), their constructions and applications, process capability. Basic concept of sampling inspection, Single and double sampling plans. Operating characteristic curves | 7 Hrs |

ME603-DESIGN OF MACHINE ELEMENTS-II

| Lectures | : 3 Hrs/Week | Evaluation Scheme | | | |
|-----------|--------------|--------------------------|--|--|--|
| Credit | : 3 | ISE : 40 Marks | | | |
| Tutorials | : 1 Hr/Week | ESE : 60 Marks | | | |

| Course | Course Objectives : The objective of the course is able to | | | | | |
|-------------------------|---|--------------------------------|--|--|--|--|
| 1. Des | 1. Design machine elements subjected to fluctuating loading. | | | | | |
| 2. Und helio give | 2. Understand the standard nomenclature, forces, failures, application, design procedure of Spur, helical ,bevel and worm gears (As per AGMA) and to determine standard geometry under given loading condition by using design data hand book and AGMA procedure. | | | | | |
| 3. Und | lerstand the different types of bearings, application, failures, selection proc | edure of Ball | | | | |
| Bea desi | rings (As per Manufacturer Catalog) and Sliding contact bearing and to deter gn procedure of bearing under different loading condition by using design dat | mine standard ta hand book. | | | | |
| Course | Outcomes: | | | | | |
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | |
| | Evaluate the stresses in machine components due to various types of | Knowledge | | | | |
| CO1 | fluctuating loads and failure of components according to theories of failures. | Understand | | | | |
| CO2 | Develop capability to analyze rolling contact bearing and its selection | Analyze | | | | |
| 002 | from manufacturer's catalogue | Apply | | | | |
| CO3 | Achieve an expertise in design of sliding contact bearing in industrial applications. | Evaluate | | | | |
| CO4 | Apply principles of spur gear design during industrial gear boxes. | Understand Apply | | | | |
| CO5 | Design of Helical and Bevel Gears. | Analyze Apply | | | | |
| CO6 | Design worm gear for various industrial applications. | Analyze | | | | |

| Description: | | |
|---|-----------------------|---|
| Design of Machin namely, Design f Contact Bearings, Gears. | ie El for F Des | ements –II course is offered as professional course. This course has six units Fluctuating Loads, Design of Rolling Contact Bearings, Design of Sliding sign of Spur Gear, Design of Helical and Bevel Gears and Design of Worm |
| | 1 | Analysis of Mechanical Elements |

| | 1: | Analysis of Mechanical Elements | |
|----------------|----|---------------------------------|-----------|
| Prerequisites: | 2: | Material Science and Metallurgy | |
| | 3: | Applied Mechanics | UNSTITUTE |

8

| | Section – I | | | | |
|--------|---|-------------|--|--|--|
| | Design for Fluctuating Loads | | | | |
| Unit 1 | Stress concentration - causes and remedies, Fluctuating stresses, S-N. diagram under fatigue load, Endurance limit, Notch sensitivity, Endurance strength modifying factors, Design for finite and infinite life under reversed stresses, Cumulative damage in fatigue failure, Goodman diagram, Modified Goodman diagram, Fatigue design for components under combined stress. | | | | |
| | Design of Rolling Contact Bearings | | | | |
| Unit 2 | Rolling Contact Bearing: Types, Static and dynamic load capacities, Stribeck's equation (No Derivation), Equivalent bearing load, Load-life relationship, Bearing life, Load factor, Selection of bearing from manufactures catalogue, Ball and Roller bearing, Design for variable load and speed, Bearings with probability of survival other than 90 %. Lubrication and mountings, Dismounting and preloading of bearings, Oil seal and packing. | 7 Hrs | | | |
| | Design of Sliding Contact Bearings | | | | |
| Unit 3 | Introduction to Tribological consideration in design Friction, Wear, Lubrication., Sliding Contact Bearing: Bearing material and their properties: Sintered bearing materials, bearing types and their construction details., Hydro-Dynamic Lubrication: Basic theory, Thick and thin film lubrication, Somerfield Number, Design consideration in hydrodynamic bearings, Raimondi and Boyd method relating bearing variables, Heat balance in journal bearings, Temperature rise | 6 Hrs | | | |
| | Section – II | | | | |
| | Design of Spur Gear | | | | |
| Unit 4 | Introduction to Gears: Gear terminology, Material selection, Types of gear failure. Spur Gear: Tooth loads, No. of teeth, Face width, Strength of gear teeth, Static beam strength (Lewis equation) Barth equation, Dynamic tooth load (spot's equation and Buckingham equation), Wear strength (Buckingham's Equation), Estimation of module based on beam strength and wear strength. Gear design for maximum power transmission capacity, Methods of gear lubrication. | 7 Hrs | | | |
| | Design of Helical and Bevel Gears | | | | |
| Unit 5 | Helical Gears: Formative number of teeth in helical gears, Force analysis, Beam and wear strength of helical gears, Effective load and design of helical gear. Bevel Gear: Straight tooth bevel gear terminology and geometrical relations, Guidelines for selection of dimensions and minimum number of teeth, Force analysis, Mounting of bevel gear and bearing reactions, Beam and wear strength, Dynamic tooth load, Design of straight tooth bevel gears/ based on beam and wear strength. | 6 Hrs | | | |
| | WARANANAO Dist. Kolhar | SAR EN GING | | | |

| | Design of Worm Gears | | | | | | | | |
|--------|--|-------|--|--|--|--|--|--|--|
| Unit 6 | Terminology and geometrical relations. Standard dimensions and recommendation of worm gearing, Force analysis, Friction, Efficiency of worm gear drive, Design of worm drive as per IS 7443-1974 based on beam strength and wear strength rating, Thermal consideration in worm drive. | 7 Hrs | | | | | | | |

ME604-INTERNAL COMBUSTION ENGINES

| Lectures | : | 3 Hrs/Week | Evaluation Scheme | | | |
|-----------|---|------------|--------------------------|---|----------|--|
| Credit | : | 3 | ISE | : | 40 Marks | |
| Tutorials | : | | ESE | : | 60 Marks | |

Course Objectives: The objective of the course is to

- 1. Study constructional details and various types of internal combustion engine.
- 2. Understand and analyze thermodynamic cycles of IC engines.
- 3. Understand combustion phenomenon in SI engine and CI engines.
- 4. Impart knowledge about various systems on the IC engines.
- 5. Impart knowledge about various engine performance characteristics and its testing.

Course Outcomes:

| Course Outcomes. | | | | | | |
|------------------|--|-------------------------|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | |
| CO1 | Demonstrate engine construction, function of various parts of the engine and classify IC Engines. | Knowledge Understand | | | | |
| CO2 | Identify different parts and systems of the engine along with its function | Apply | | | | |
| CO3 | Explain the process of air and fuel induction in IC Engines. | Understand | | | | |
| CO4 | Understand combustion process in IC engines and study the types of combustion chambers. | Understand Analyze | | | | |
| CO5 | Perform engine testing and evaluate engine performance parameters. | Apply Evaluate | | | | |
| CO6 | Predict impact of internal combustion engines on environment and ways to reduce them. | Analyze | | | | |

Description:

This course studies the fundamentals of how the design and operation of internal combustion engines affect their performance, efficiency, fuel requirements, and environmental impact.

| | 1: Engineering Thermodynamics |
|----------------|-------------------------------|
| Prerequisites: | 2: Fluid Mechanics |
| | 3: Fluid and Turbo Machinery |

| | Section – I | |
|--------|--|--------|
| | Introduction to I.C. Engines | |
| Unit 1 | Classification of I. C. Engines, applications, Selection of IC Engine for different applications, Engine specifications, Engine cycles (Carnot, Otto, Diesel), Only numerical on Air standard cycles (Otto and Diesel cycles only), Deviation of actual cycles from air standard cycles, Valve timing diagram for high and low speed engine, Port timing diagram. Fuel Systems for SI and CI Engines | 6 Hrs |
| | SI engines: Engine fuel requirements complete carburetor. Derivation for | |
| Unit 2 | b) Engines: Engine rule requirements, complete carburetor, Derivation for calculation of A/F ratio, Calculation of main dimensions of carburetors (Only Approximate analysis numerical), Effect of altitude on Air fuel ratio. Fuel injection systems in SI engine, TBI, MPFI, GDI etc. diagram, merits and demerits. CI engines: Requirements of injection system, Types of injection systems Individual pump, Common rail and Distributor systems, Unit injector, Types of fuel nozzles- single hole, multi hole, pintle, and pintaux, Formation of Spray, Atomization and penetration, Calculations of main dimension of fuel injection system (EMS): Functional diagram of EMS, different components of EMS (ECU, alternator, throttle body assembly, mass flow sensor, throttle position sensor, temperature sensor, fuel injector, crank position sensor, camshaft sensor, fuel pump module, rollover sensor, lambda or oxygen sensor, air-fuel ratio sensor, coolant temperature sensor, solenoids, relays etc. function of each component), merits and demerits of EMS. On board diagnostics (OBD) systems. | 8 Hrs |
| | Combustion in S. I. Engines | |
| Unit 3 | Stages of combustion, Ignition lag, Flame propagation, Factors affecting flame speed, Abnormal combustion, Influence of engine design and operating variables on detonation, Fuel rating, Octane number, Fuel additives, HUCR, Requirements of combustion chambers of S.I. Engines and its types. | 6 Hrs |
| | Section – II | |
| | Combustion in C.I. Engines | |
| Unit 4 | Stages of combustion, Delay period, Factors affecting delay period, Abnormal combustion- Diesel knock, Influence of engine design and operating variables on diesel knock, Comparison of abnormal combustion in S.I. and C.I. Engines, Cetane number, Additives. Requirements of combustion chambers for C.I. Engines and its types | 6 Hrs |
| | Performance Testing of Engines | |
| Unit 5 | Performance parameters, Measurement of performance parameters like torque, power, Volumetric Efficiency, Mechanical Efficiency, BSFC, Brake and Indicated Thermal efficiencies. Numerical on Heat Balance Sheet and engine performance, Performance curves. | GAR E |
| | HE Dist. Kolha | pur se |

| | Engine Emission and Control | |
|--------|--|-------|
| Unit 6 | Introduction to Supercharging and Turbo-charging, S.I. engine emission (HC, CO, NOx) Control methods- Evaporative (ELCD), Thermal, Catalytic converters, CI Engines Emission (CO, NOx, Smog, Particulate), Control methods- Chemical, EGR, Standard pollution Norms like EURO, Bharat, Introduction to alternative fuels for I.C. engines. | 8 Hrs |

ME-L-605-INDUSTRIAL MANAGEMENT AND OPERATION RESEARCH

| Lectures | : | 3 Hrs/Week |
|-----------|---|------------|
| Credit | : | 3 |
| Tutorials | : | 1 Hr/Week |

Evaluation Scheme

| ISE | : | 40 Marks |
|-----|---|----------|
| ESE | : | 60 Marks |

Course Objectives: The objective of the course is able to

1. State various functions of management.

2. Know Production and marketing functional area of management.

3. Aware about norms of SSI, Industrial safety, MIS.

4. Apply Various Models of Operation Research Such as Linear Programming Model, Assignment

Model, Transportation Model, Network Model and Sequencing Model.

Course Outcomes:

| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy |
|-----|--|---------------------|
| CO1 | Apply the concepts of Industrial management and operations research approaches. Know various functional areas of management. | Knowledge |
| CO2 | Analyze issues in Managing operations and projects and various approaches to resolve those issues. | Understand |
| CO3 | Understand MIS and Entrepreneurship Development | Understand Apply |
| CO4 | Formulate and solve a wide variety of problems using Linear Programming Problems (LPP). | Apply |
| CO5 | Formulate and solve a wide variety of problems using Transportation and Assignment problems. | Apply Evaluate |
| CO6 | Implement the various techniques of Project Management such as Network Model and Sequencing Model to solve industrial problem. | Apply |

| Description: | | | | | | | | | |
|--|---|----------------------------|--|--|--|--|--|--|--|
| Industrial Management and Operation Research course is offered as the basic management course. This course contains Mathematical methods and techniques that are used to solve complex Mechanical engineering problems. This course has six units namely - | | | | | | | | | |
| Functions of Management, Functional areas of Management, Entrepreneurship Development, Introduction to Operations Research and Linear Programming Problems, Assignment Model and transportation model and Network model and sequencing | | | | | | | | | |
| | 1 | Engineering Mathematics-I | | | | | | | |
| Prerequisites: | 2 | Engineering Mathematics-II | | | | | | | |
| | | WARANANAGAR | | | | | | | |

| | Section – I | |
|--------|---|--------|
| | Functions of Management | |
| Unit 1 | Definition of Management, Planning –Objectives, steps in Planning, elements of planning, Organizing – Process of Organizing, principle of organizing, departmentation, Span of control. Staffing –Scope, Human resource management, Policies, Recruitment procedure, training and development, appraisal methods. Leading – Leadership style, Communication process, Barriers, remedies, Motivation, importance Herzberg's theory, Maslow's theory, McGregor's theory. Controlling– Process, Requirement for control management. | 8 Hrs |
| | Functional areas of Management | |
| Unit 2 | Production Management-Product mix, line balancing, break even analysis, Problem solving Techniques. Marketing Management –Principles & Functions, Types of Market, Market Research, Market Segmentation, Marketing Mix, and Advertisement. | 7 Hrs |
| | Entrepreneurship Development | |
| Unit 3 | Types of small scale industries (SSI), stages in starting SSI, Qualities required to be Entrepreneur, Government policies for SSI, Problems of SSI, Feasibility Report writing, Industrial Safety. Management Information System. | 5 Hrs |
| | Section – II | |
| | Introduction to Operations Research and Linear Programming Problems | |
| Unit 4 | History and development of OR, OR models and their Applications, Formulation of LPP problem, Graphical solution of LPP, Simplex procedure for maximization, Simplex procedure for minimization, Duality concept. | 6 Hrs |
| | Assignment Model and transportation model | |
| Unit 5 | Assignment Model- Mathematical statement, Methods to solve balanced assignment problems, Unbalanced assignment problems, Maximization problems, Assignment with restrictions. Transportation model- Mathematical formulation, methods to obtain initial basic feasible solution (IBFS)- NWCR ,LCM and VAM, Conditions for testing optimality, MODI method for testing optimality of solution of balanced problems and unbalanced problems | 7 Hrs |
| | Network model and sequencing | |
| Unit 6 | CPM-Construction of network, Critical path, forward and backward Path, Floats and their significance. PERT- construction of networks, Time estimates, Probability of completing project by given date. Sequencing-Sequencing of n jobs & 2 machines, Sequencing of n jobs & 3 machines | 7 Hrs |

ME605- OEC-II SMART MATERIALS

| Lectures | : 3 Hrs/Week | Evaluation Scheme |
|----------|--------------|--------------------------|
| Credit | : 3 | ISE : 40 Marks |
| | | ESE : 60 Marks |

Course Objectives: The objective of the course is to

1. Study various types of smart materials used in engineering application

- 2. Study processing of smart materials
- 3. Study basics of sensors and its engineering application
- 4. Study basics of actuators and its engineering application

| | Course Outcomes: | | | | | | | |
|-----|--|-------------------------|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | |
| CO1 | Understand various smart material and its importance in engineering application | Knowledge Understand | | | | | | |
| CO2 | Know various processing techniques of smart materials. | Knowledge | | | | | | |
| CO3 | Get knowledge of use of smart material as sensors. | Understand Apply | | | | | | |
| CO4 | Get knowledge of use of smart material as actuators. | Understand Apply | | | | | | |
| CO5 | Select materials for sensor applications based on required properties. | Apply Evaluate | | | | | | |
| CO6 | Evaluate shape memory materials, electro rheological fluids for newer applications | Apply | | | | | | |

Description:

Smart materials, also called intelligent or responsive materials, are designed materials that have one or more properties that can be significantly changed in a controlled fashion by external stimuli, such as stress, moisture, electric or magnetic fields, light, temperature, pH, or chemical compounds. Smart materials are the basis of many applications, including sensors and actuators, or artificial muscles, particularly as electro active polymers (EAPs).

| | : Material Science and Metallurgy | |
|------------------|-----------------------------------|--|
| Prerequisites: 2 | Basic Mechanical Engineering | |

| | Section – I | |
|---------------|---|-------|
| | Introduction | |
| Unit 1 | Characteristics of metals, polymers and ceramics. Introduction to smart materials. Classification of smart materials, Components of a smart System, Applications of smart material | 7 Hrs |
| | Smart Materials | |
| Unit 2 | Piezoelectric materials, Electro-strictive Materials, Magneto-strictive materials, Magneto-electric materials, Magnetorheological fluids, Electrorheological fluids, Shape Memory materials | 6 Hrs |
| | Processing of Smart Materials | |
| Unit 3 | Semiconductors and their processing, Metals and metallization techniques, Ceramics and their processing, Polymers and their synthesis, UV radiation curing of polymers | 7 Hrs |
| | Section – II | |
| | Sensors | |
| Unit 4 | Introduction, Conductometric sensors, Capacitive sensors, Piezoelectric sensors, Magneto-strictive sensors, Piezoresistive sensors, Optical sensors, Resonant sensors, semiconductor-based sensors, Acoustic sensors, polymerize sensors, Carbon nanotube sensors | 7 Hrs |
| | Actuators-I | |
| Unit 5 | Introduction, Electrostatic transducers, Electromagnetic transducers, Electrodynamic transducers, Piezoelectric transducers | 7 Hrs |
| | Actuators-II | |
| Unit 6 | Electro-strictive transducers, Magneto-strictive transducers, Electro thermal actuators, Comparison of actuation, Applications | 6 Hrs |

ME601T PROCESS PLANNING AND COST ESTIMATION LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 25 Marks POE :NA

| Course Objectives: The objective of the course is to | | | | | | | |
|--|---|--------------------|--|--|--|--|--|
| 1. Unders | 1. Understand the basic concept of process planning | | | | | | |
| 2. Unders | tand the different method of cost estimation in different manufacturing | g shops. | | | | | |
| Course Ou | tcomes: | | | | | | |
| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | |
| CO1 | Prepare process planning activity chart& explain concept of Cost estimation. | Create | | | | | |
| CO2 | Compute the job order cost for different type of shop floor. | Analyze | | | | | |
| CO3 | CO3 Calculate the machining time for various machining operations. Create and Analyze | | | | | | |
| CO4 | Estimate the process costing and accounting required during industrial products. | Knowledge | | | | | |

| Description: | | | | | | | | | |
|--|---|--|--|--|--|--|--|--|--|
| This course will also help in developing the skills required in Estimate production/operation cost | | | | | | | | | |
| for budgeting and | for budgeting and analysis | | | | | | | | |
| | 1: Material Science and Metallurgy | | | | | | | | |
| Prerequisites: | 2: Manufacturing Process and Manufacturing Technology | | | | | | | | |
| | 3: Manufacturing Engineering | | | | | | | | |

Practicals:

| Sr. No. | Practical Topic | Hrs. | Bloom's Taxonomy |
|------------|---|----------|-----------------------|
| 1 | Case study of preparation of process planning chart of any one component in small scale industry (Machine Shop). | 2 | Analyze |
| 2 | Collect the finished parts from industries/market/scrap merchants Measure the dimensions and prepare production drawings of the parts using A4 size paper. Estimate the material cost | 2 | Create STI Analyze |
| 3 | Demonstration of method to estimate cost taking live demonstration at work shop place, steps based handouts | 22 | Knowledge |
| | | APPER DE | st. Kolhapur |

| 4 | Machining estimation: a. Determine raw material volume for all machined parts. b. For each part, tabulate operation, cutting tool/s to be used and cutting parameters (speed, feed and depth of cut) to be used. c. Estimate raw material cost. d. For each part, estimate machining cost. Show the assumptions and steps followed to estimate machining cost. e. Derive total cost of parts | 2 | Create Analyze |
|---|---|---|-------------------|
| 5 | Discussions, real life industries situation, industrial visits | 2 | Knowledge |

ME602P - METROLOGY AND QUALITY CONTROL LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 25 Marks POE : 25

Course Objectives: The objective of the course is to

1. Study the use of various linear measuring instruments.

- 2. Study and understand the use of various comparators and angle measuring instruments.
- 3. Learn the use of floating carriage micrometer for screw thread measurement and the use of gear tooth Vernier caliper for spur gear measurement.
- 4. Study the use of optical flat for the measurement of flatness of the component and use of optical profile projector for the measurement of different features of the screw thread.
- 5. Study the use of Coordinate Measuring Machine to check the geometrical dimensions.
- 6. Study the capability of the process by using various control charts.

Course Outcomes:

| Cos | At the end of successful completion of the course, the student will be able to | Blooms |
|-----|---|------------------------|
| | | Taxonomy |
| CO1 | Use various linear and angular measuring instruments, comparators and select appropriate instrument for particular feature measurement. | Understand Evaluate |
| CO2 | Understand working and use of various measuring instruments for screw threads and gear teeth. | Understand Apply |
| CO3 | Apply the knowledge and the use of Coordinate Measuring Machine to check the geometrical dimensions. | Understand Apply |
| CO4 | Understand and evaluate the capability of the process by using various control charts. | Analysis Evaluate |

Description:

The Metrology and Quality Control laboratory consists of a number of measuring instruments, gauges and their use to check the dimensional features and physical dimensions of various components. Students are able to enhance their basic and fundamental knowledge of machine drawing to study the dimensional features and physical dimensions of the components and by selecting the appropriate measuring instrument they should able to check these dimensional features and physical dimensions of the various components used in the industry.

Prerequisites: 1: Machine

Machine Drawing

Practicals:

| Sr. No. | Practical Topic | Hrs. | Bloom's Taxonomy |
|------------|--|------|-------------------------|
| 1 | Study and use of linear measuring instruments. | 2 | Understand Apply |
| 2 | Study and use of comparators. (Practical use of pneumatic/mechanical comparator). | 2 | Understand Apply |
| 3 | Study and use of bevel protractor and sine bar for angle measurement. | 2 | Understand Apply |
| 4 | Study and use of floating carriage micrometer for screw thread measurement. | 2 | Understand Apply |
| 5 | Study and use of gear tooth Vernier caliper for spur gear measurement. | 2 | Understand Apply |
| 6 | Study and use of optical flat | 2 | Knowledge Understand |
| 7 | Study and use of use of optical profile projector | 2 | Understand Apply |
| 8 | Study and use of Coordinate Measuring Machine to check the geometrical dimensions. | 2 | Knowledge Understand |
| 9 | Assignment on control charts. | 2 | Analysis Evaluate |

ME603T-DESIGN OF MACHINE ELEMENTS LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 25 Marks POE : NA

Course Objectives: The objective of the course is to

1.Design machine elements subjected to fluctuating loading.

- 2.Understand the standard nomenclature, forces, failures, application, design procedure of Spur, helical, bevel and worm gears (As per AGMA) and to determine standard geometry under given loading condition by using design data hand book and AGMA procedure.
- 3.Understand the different types of bearings, application, failures, design procedure of Ball Bearings (As per Manufacturer Catalog) and Sliding contact bearing and to determine standard design procedure of bearing under different loading condition by using design data hand book.

| Course Outcomes: | | | | | | |
|------------------|--|-------------------------|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | |
| CO1 | Evaluate the stresses in machine components due to various types of fluctuating loads and failure of components according to theories of failures. | Knowledge Understand | | | | |
| CO2 | Analyze rolling contact bearing and its selection from manufacturer's catalogue | Knowledge Understand | | | | |
| CO3 | Understand and apply principles of gear design to spur gears and industrial spur gear boxes. | Evaluate Analyze | | | | |
| CO4 | Design of Helical, Bevel and Worm Gear for various industrial applications. | Analyze | | | | |

| Description: | | | | | | | | |
|---|----|---------------------------------|--|--|--|--|--|--|
| The Design of Machine Elements-II laboratory syllabus consists of a design of gear box, selection of rolling contact bearing and design of components subjected to fluctuating loads. | | | | | | | | |
| | 1: | Analysis of Mechanical Elements | | | | | | |
| Prerequisites: | 2: | Material Science and Metallurgy | | | | | | |
| | 3: | Applied Mechanics | | | | | | |

Practicals :

| Sr. No. | Practical Topic | Hrs. | Bloom's Taxonomy |
|------------|--|------|---------------------|
| 1 | Construction of gears such as hub, web, arm, rim type etc. Design considerations of gear box | 2 | Evaluate Analyze |
| 2 | A detail design report and two sheets containing working drawing of details and assembly i) Spur gear/ Helical gear | 2 | Knowledge, Apply |
| 3 | A detail design report and two sheets containing working drawing of details and assembly ii) Bevel gear / Worm and Worm Wheel. | 2 | Knowledge, Apply |
| 4 | Assignments based on study of ball bearing mountings and its selection preloading of bearings. | 2 | Analyze Apply |
| 5 | Industrial visit based on above syllabus | 2 | Understand |

ME604P INTERNAL COMBUSTION ENGINES LAB

Practicals: 2 hrs/ weekCredits: 1

Examination Scheme ISA : 25 Marks POE : 25 Marks

Course Objectives: The objective of the course is to

- 1. Learn different parts of reciprocating IC engines and their functions.
- 2. Study various systems of IC engines like air intake, exhaust, lubrication and cooling.
- 3. Test the performance of IC engines with help of engine test rig.

| Course Outo | Course Outcomes: | | | | | | | | | | | |
|-------------|---|---------------------|--|--|--|--|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be | Blooms | | | | | | | | | | |
| 000 | able to | Taxonomy | | | | | | | | | | |
| CO1 | Identity & demonstrate different components and systems of IC engines. | Apply | | | | | | | | | | |
| CO2 | Understand functional details of engine systems. | Understand Apply | | | | | | | | | | |
| CO3 | Evaluate the IC engines performance parameters by conducting experiments. | Evaluate Analyze | | | | | | | | | | |
| CO4 | Measure engine emissions and study of emission norms. | Analyze | | | | | | | | | | |

Description:

IC engines lab consists of a practical study of whole IC engines (different parts and systems) with help of demonstrative engines. The course also covers the testing of SI and CI engines and evaluation of performance of these engines for different performance parameters.

| | 1: | Engineering thermodynamics |
|----------------|----|----------------------------|
| Prerequisites: | 2: | Fluid mechanics |
| | 3: | Fluid and turbo machinery |

Practicals:

| Sr. No. | Practical Topic | Hrs. | Bloom's Taxonomy |
|------------|--|------|-------------------------|
| 1 | Constructional detail of I.C. engines, dismantling and assembly. | 2 | Understand |
| 2 | Study and Demonstration of Engine systems: Air Intake, Exhaust, Cooling, Lubrication systems. | 2 | Understand |
| 3 | Study and Demonstration of Ignition systems, starting systems. | 2 | Apply |
| 4 | Study and Demonstration of Carburetor and Petrol injection system. | 2 | Apply |
| 5 | Study and Demonstration of fuel injection system of diesel engine. | 2 | Knowledge Understand |
| 6 | Study of engine management system of any car/motorcycle and detail report. | 2 | Understand Apply |
| Test group | (Any five) | | |
| 7 | Test on four stroke Diesel Engine. | 2 | Analyze Evaluate |
| 8 | Morse Test on Multi Cylinder Engine. | 2 | Analyze Evaluate |
| 9 | Test on variable compression ratio engine. | 2 | Analyze Evaluate |
| 10 | Test on computerized IC engine. | 2 | Analyze |
| 11 | Visit PUC center and submit PUC certificate photocopy of your own vehicle. | 2 | Understand Analyze |
| 12 | Visit to an engine manufacturing company / repairing unit. | 2 | Understand Analyze |

ME306 T- CAD/CAM & 3D PRINTING LABORATORY

Practicals : 2 hrs / week Credits : 1

Examination Scheme ISA :50 Marks POE : NA

Course Objectives: The objective of the course is to

- 1. Develop an ability to create constrained 2-D Sketches.
- 2. Create Solid Models of machine components.
- 3. Understand the concept of 3D Printing.

| Course Outcomes: | | | | | | | | | | | |
|------------------|---|---------------------|--|--|--|--|--|--|--|--|--|
| COs | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | | | |
| CO1 | Understand and read engineering Drawings. | Understand | | | | | | | | | |
| CO2 | Prepare solid models from 2D drawings. | Apply | | | | | | | | | |
| CO3 | Prepare assemblies and BOM. | Apply | | | | | | | | | |
| CO4 | Understand the basics of Computer Aided Manufacturing and the concept of 3D Printing. | Understand Apply | | | | | | | | | |

Description:

The CAD/CAM & 3D Printing laboratory consists of CATIA software to make 2D and 3D object. Students will be able to enhance their basic and fundamental knowledge of machine drawing to make 2D and 3D models effectively.

| | 1: | Machine Drawing |
|----------------|----|-----------------|
| Prerequisites: | 2: | AutoCAD |

ME607T – INDUSTRIAL TRIAINING

Practicals :--Credits :1 Examination Scheme ISA : 50 Marks POE :--

| Course Objectives: The objective of the course is to | | | | | | | | | | | | |
|--|--|--------------------|--|--|--|--|--|--|--|--|--|--|
| 1. To familiar the students to realize an industrial work. | | | | | | | | | | | | |
| | | | | | | | | | | | | |
| Course Outc | omes: | | | | | | | | | | | |
| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | | | | |
| CO1 | Understand and interpret the knowledge gained in the course work | Knowledge | | | | | | | | | | |
| CO2 | Create, select, learn and apply appropriate techniques, resources, and modern engineering tools. | Apply | | | | | | | | | | |
| CO3 | Develop the capability to work in team. | Analyze Create | | | | | | | | | | |
| CO4 | Write technical report. | Apply Create | | | | | | | | | | |

Description:

The students have to undergo an industrial training of minimum two weeks in an industry preferably dealing with Mechanical engineering during the semester break after Sixth semester and complete within 15 calendar days before the start of seventh semester. The students have to submit a report of the training undergone and present the contents of the report before the evaluation committee constituted by the department. An internal evaluation will be conducted for examining the quality and authenticity of contents of the report and award the marks at the end of the semester.

It is expected that students should undertake small assignment or work related to any of the course related aspect. Report is based on compilation of work carried out related to facility and layout planning, Industrial engineering- time study and motion study, Line efficiency evaluation and improvement, process capability evaluation, Industrial automation, process or machinery modification as identified.

| Industrial | Maximum fifteen students in one batch, involving three groups of maximum five | | | | | | | | | | |

| Cos | At the end of successful completion of the course, the student will be able to | Blooms Taxonomy | | | | | | | | | |
| CO1 | Identify small real engineering and societal problems through different types of surveys (Literature survey, Industrial survey etc.) | Understand Knowledge | | | | | | | | | |
| CO2 | Solve and Analyze these problems by using software / analytical / computational tools and techniques by applying engineering principles. | Apply Analyze | | | | | | | | | |
| CO3 | Develop model / technical reports with presenting skills to defend their work in front of technically qualified audience. | Evaluate Create | | | | | | | | | |
| CO4 | Develop problem solving capabilities by self-learning in a team as well as an individual, which leads to lifelong learning. | Analyze | | | | | | | | | |

| Description: | | | | | | | | | | | |
|--|--------------------------------|--|--|--|--|--|--|--|--|--|--|
| The mini project in tools/techniques in institutions. Each is constant consultate provided them. | is de 1 orc stude ion | signed to help students develop practical ability and knowledge about practical der to solve real life problems related to the industry, society and academic ent of the project group shall involve in carrying out the project work jointly in with guide, batch Incharge and prepare the project report as per the norms | | | | | | | | | |
| Prerequisites | 1: | Engg. Mathematics, Engg. Physics, Engg. Chemistry | | | | | | | | | |
| r rerequisites. | 2: | Basic Knowledge of Mechanical Engg. | | | | | | | | | |

Practical's:

| Guidelines and Activities for Mini Project throughout year | | | | | | | | |
|--|---|--|--|--|--|--|--|--|
| | First Semester Activities | | | | | | | |
| Allotment of Batch in charge and Guide | Department will provide you batch in charge for every batch in the time table. Allotted faculty takes care of whole batch throughout semester. Also after formation of group, project guide will be allotted to each group by department for throughout year. He will be entirely guide you, starting from the selection of topic to the completion. Batch in-charge will keep the record of entire batch during practical hours. He will also coordinate the activity along with guide and project coordinator. | | | | | | | |
| Group formation | Group should be formed within the Batch of 4 to 5 students in one group, not more than that | | | | | | | |
| Topic Selection | By doing the discussion along with your concerned guide. Group should decide the topic for Mini Project. ***Project work shall be based on any of following 1. Design and development/fabrication of small setup/model 2. Theoretical/Software analysis of any small mechanical system/subsystem of large system 3. Testing and analysis of small mechanical system 4. Software program for any mechanical system design or analysis 5. Industrial survey of any mechanical systems, data collection and analysis | | | | | | | |
| Literature review | After selection of topic student should collect related information by searching and xeroxing/ downloading the journal paper from various sources. Also xeroxing the reference books pages related to their topic. | | | | | | | |
| Synopsis Writing | This is important activity of this semester. Synopsis is blueprint/plan of your mini project. With the help of your guide you have to write synopsis in department given format. | | | | | | | |
| Progress presentation | In the middle of semester student should give the presentation on synopsis in front of guide and batch incharge. | | | | | | | |
| Expected work in Semester - I | Each project group must complete, minimum these activities at the end of first semester 1) Synopsis writing 2) Literature Review Chapter (6- 8 pages) 3) Theoretical Design on Paper | | | | | | | |
| Final Presentation of Mini Project semester I | At the end of semester, each group will give presentation on project work of this semester in front of guide, batch in-charge and one more faculty from department. This presentation will be assessed for 25 Marks internal term work. You have to submit two hard copies of your synopsis report to the department along with you have to show the project diary** and literature review file*** | | | | | | | |

| Second Semester Activities | | | | | | | | | |
|--|---|--|--|--|--|--|--|--|--|
| Continuation of Work | Same group with same guide continued their previous semister work in next semister it is expected that at least 30 percent work should completed in first semester | | | | | | | | |
| Fabrication and Testing of model/Theoretical analysis /Surveying analysis/Testing of software program | Complete core part of your project as above under the instructions of guide | | | | | | | | |
| Presentation of your work in the form of project report | Writing the Project report of 20 to 25 pages in standard format given by department. | | | | | | | | |
| Progress presentation | In the middle of semester student should give the progress presentation in front of guide and batch in charge. | | | | | | | | |
| Final Presentation of Mini Project semester II | At the end of semester, Students have to give Project Report presentation in front of guide, batch in-charge and one more faculty from department. This presentation will be assessed for 25 Marks internal term work. Every project group should have to submit two hard copies of good quality project reports to the department along with submission of the project diary and literature review file. | | | | | | | | |
| Sponsored Project/Participated Project in Project/Paper competition | Sponsored project and project which is participated in project competition/Paper presentation, three bonus Marks shall be considered, in the final term work calculations. | | | | | | | | |
| ** Project Diary | It is simple note book in which students should keep the record of meetings, along with guide and their discussion about mini project. Also you have to maintain the record of rough calculations, drawings and observations of your project. | | | | | | | | |

| *** Literature file | Collect all the information or material related to your topic (Xerox or printout of journal papers, reference books, Hand books, internet materials etc.) in one file. |
|---------------------------|--|
| Project Report Format: | Project report should be of 10 to 15 pages (typed on A4 size sheets). For standardization of the project reports the following format should be strictly followed. Page Size: Trimmed A4 Top Margin: 1.00 Inch Bottom Margin: 1.32 Inches Left Margin: 1.5 Inches Right Margin: 1.0 Inch Para Text: Times New Roman 12 Point Font Line Spacing: 1.5 Lines Page Numbers: Right Aligned at Footer. Font 12 Point. Times New Roman Headings: Times New Roman, 14 Point Bold Face Certificate: All students should attach standard format of Certificate as described by the department. Certificate should be awarded to batch and not to individual student. Certificate should be awarded to batch and not to individual student. Certificate should have signatures of Guide, Head of Department and Principal/Director. References: References should have the following format For Papers: "Title of Paper", Authors, Journal/Conference Details, Year |

ME609A-AUDIT COURSE-VI

Practicals : ---Credits : Non - Credit Examination Scheme ISA :---Audit Point : 2

Course Objectives:

In today's highly competitive world, students have to bear a lot of mental stress to overcome from this they have to get involved in various extracurricular activities help us get mental rest and also stay physically fit. It helps students to maintain social interaction, healthy recreation, self-discipline and self-confidence. And it is very essential for students to succeed in their future career.

Course Particulars :

Any one Extracurricular Activity participation.

1) Sport Activity

2) Cultural Activity

3) Social Activity

4) NSS Participation etc.

(No semester bounding to Complete)
